8) principles of Testing

finds presents of defects not their absence :

That we found the defects for the software product in presence.

But, Not proves of absence.

Exhausting of Testing :

The Exhausting Testing is not possiple.

software Testing process is only Testing a possitive models and instructions.

Defects clustering :

Most of the defects are found in a small Number of Models. So, Testing to a small Number of Modules.

Eearly Testing :

Early Testing should be Testing a Software development process.

Because, It's easily understand a Errors. and it's Save time and cost.

Pesticide paradox :

The same Test cases are Repeated for many times, New defects are not show.

The New Test cases should be created.

depends of software Testing contexting. :

The software Testing is depends on the software product.

The E-commerce side product Test differ to the low level mobile came Testing.

Product Requirements :

The software product can't contain any defects, The product Meets the Customer requirement.

This stage are last stages of software Testing product.

3) Difference Between QA and QC.

QA :

Quality Assurance is a process of software development process.

Qc :

Quality control is a process of Testing a software development product.

	QA	Qc.
Approches	Quality Assurances approaches are, Improve a software development process.	Quality control approaches are found a detects on The software product.
Timeline	The Timeline Start from beginning of Software development process.	Quality control Timeline is Started in after The Software development.
Goal	Goal of QA is a prevent detect.	goal of Qc is find The Errors.

Assurance	The Entire team is Assurance of Quality Assurance.	~~The~~ only Testing team are Assurance of software Testing.

1) STLC :

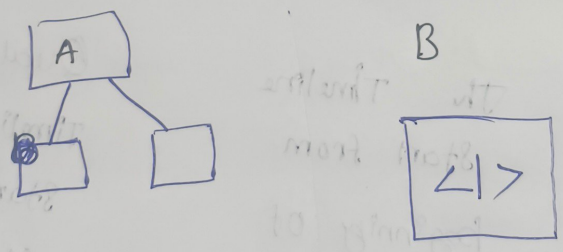
Planning Requirements.

~~Testing~~ planning

Designing

Testing

Components.



STLC have on several Stages.
